THE FLC'S MISSION

PROMOTE awareness and foster dialogue about federal R&D and the significant economic benefits of T2 among government, industry academia and external partners.

EDUCATE the federal T2 professionals on commercialization best practice strategies through various training opportunities and resources.

FACILITATE federal laboratories T2 goals through FLC-created tools and services that enable an accessible path for getting technologies from lab to market.

Foster lab-to-market strategies and connections to accelerate federal technologies.

Air Force SBIR/STTR Success Stories

The Perduco Group | Beaver Creek, OH

Woman-owned small business. \$150 million contract supporting Air Force's Strategic Development Planning and Experimentation Office. The contract supports development of an infrastructure roadmap to enable effective enterprise modeling, simulation and analysis (MS&A) capability to support acquisition tradespace exploration. In addition, on Feb. 15, 2019, Perduco received a \$39 million task order against the Phase III contract.

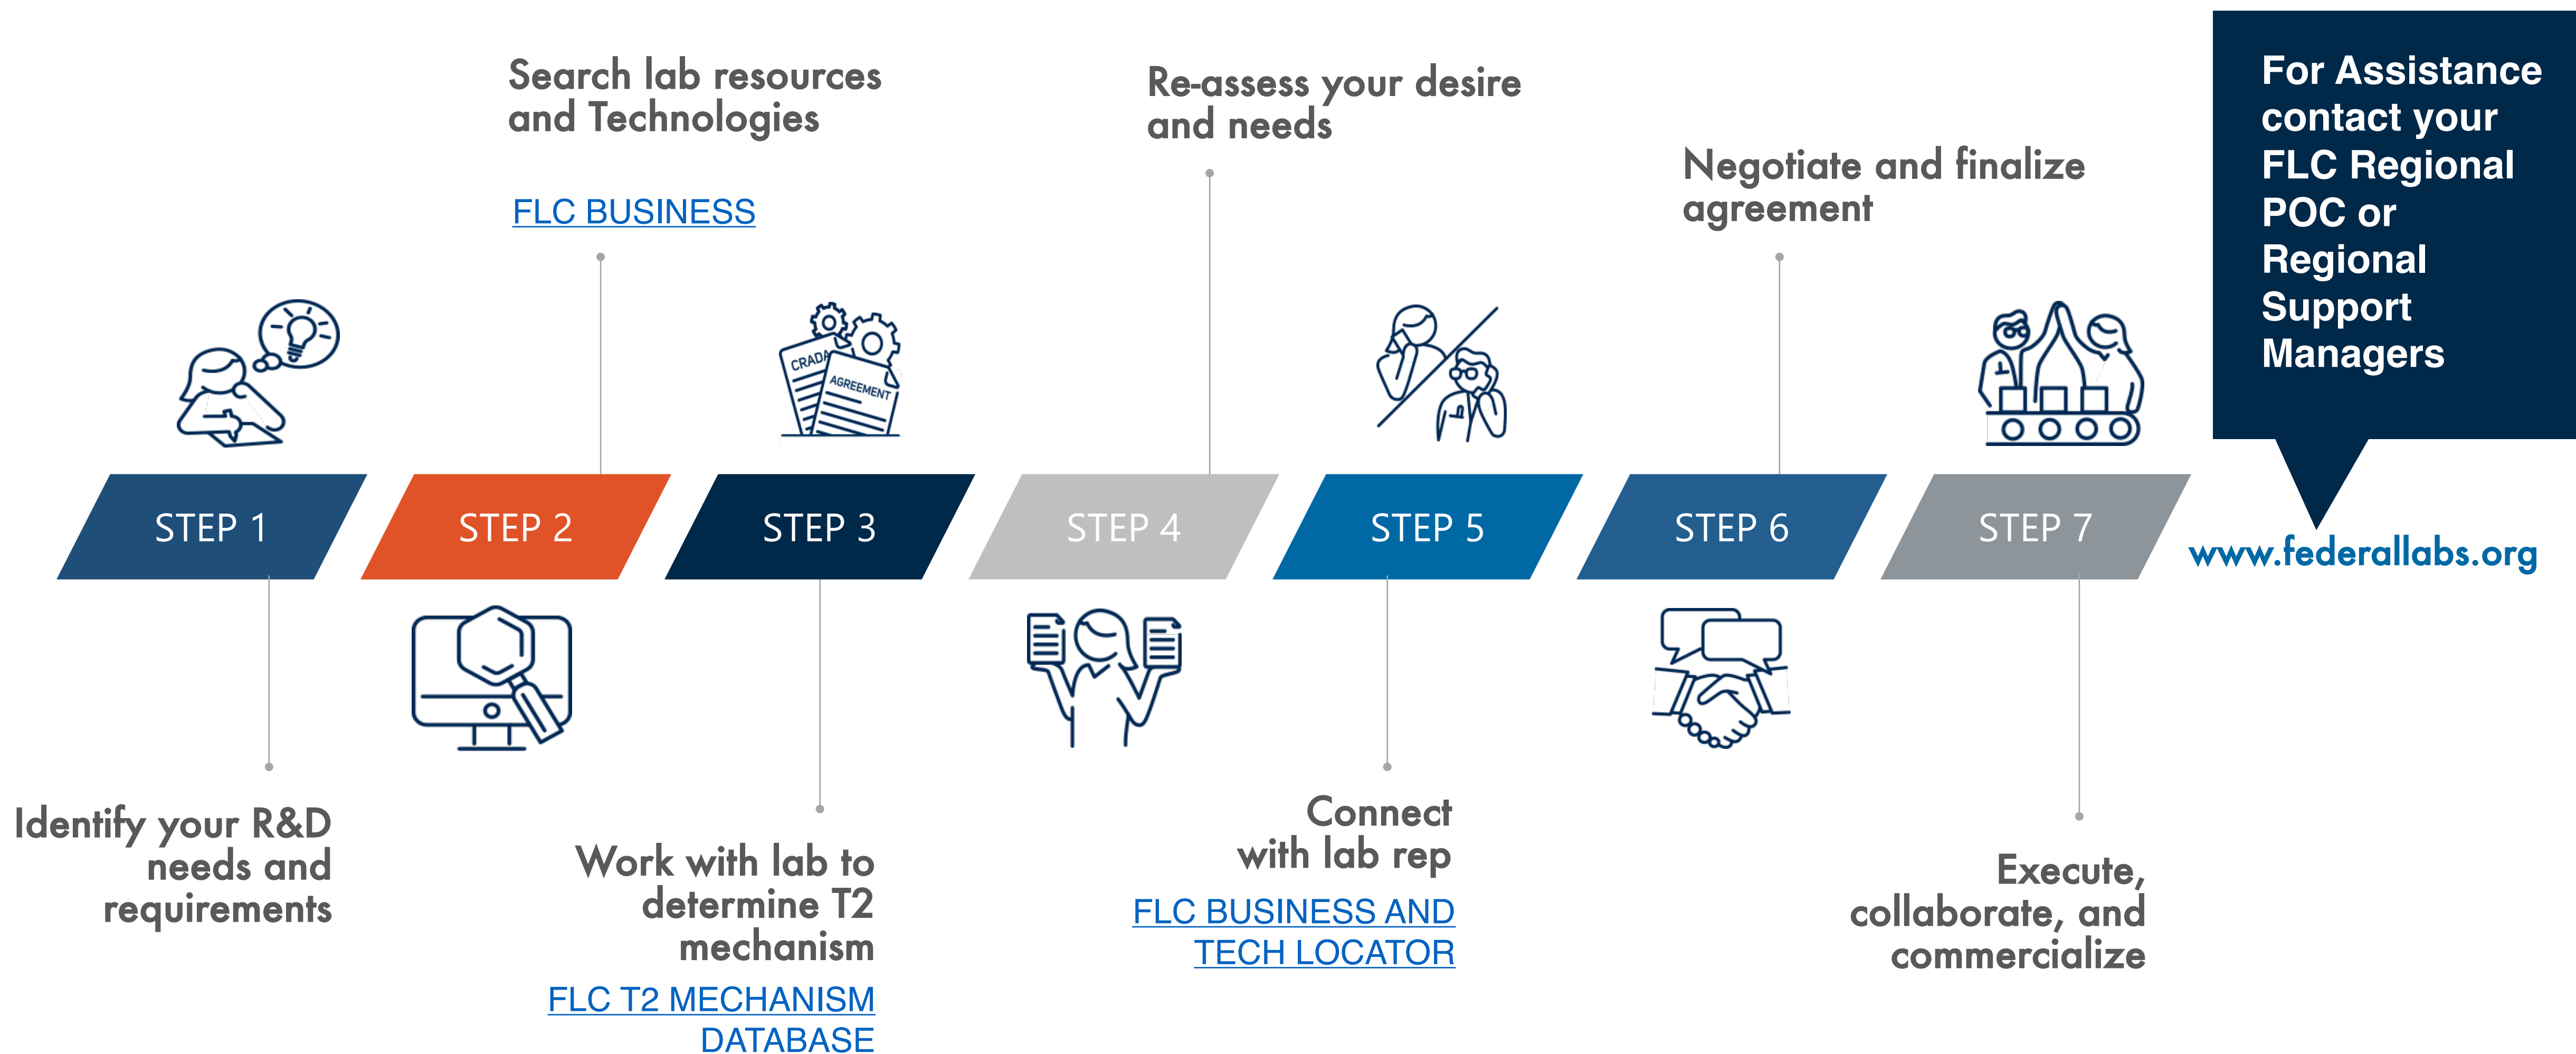

Air Force SBIR/STTR Success Stories

Tenet3 LLC | Riverside, OH

\$200 million IDIQ contract supporting AFRL Sensors Directorate.

The contract will develop cost-effective ways in which the Air Force can mitigate opportunities for information arbitrage (i.e. instances where one party knows something the other does not) by those deemed as “unfriendly” to the U.S. This will make it more difficult for adversaries to gain insight by observing U.S. systems over time and practicing their attacks on similar systems or components of these systems that are commercially available.
